Original 300 ft. Stack

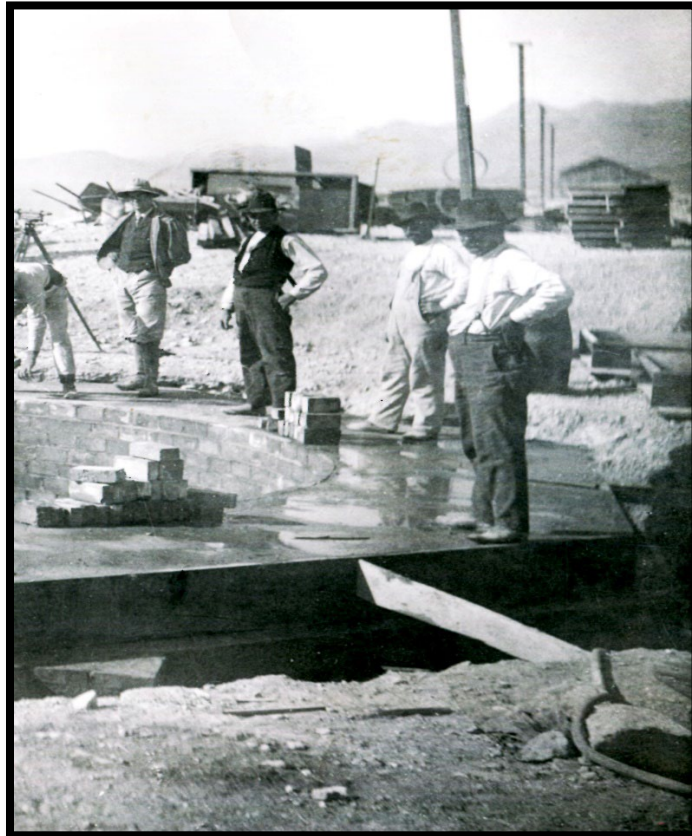

This is the base of the 300 ft. reverb stack. The photo is dated July 9, 1907. Here are some enlargements for closer viewing.

The first one shows the mules and the drag used to level the area. You can see the wooden forms around the concrete base. Bricks are starting to be stacked in different areas.

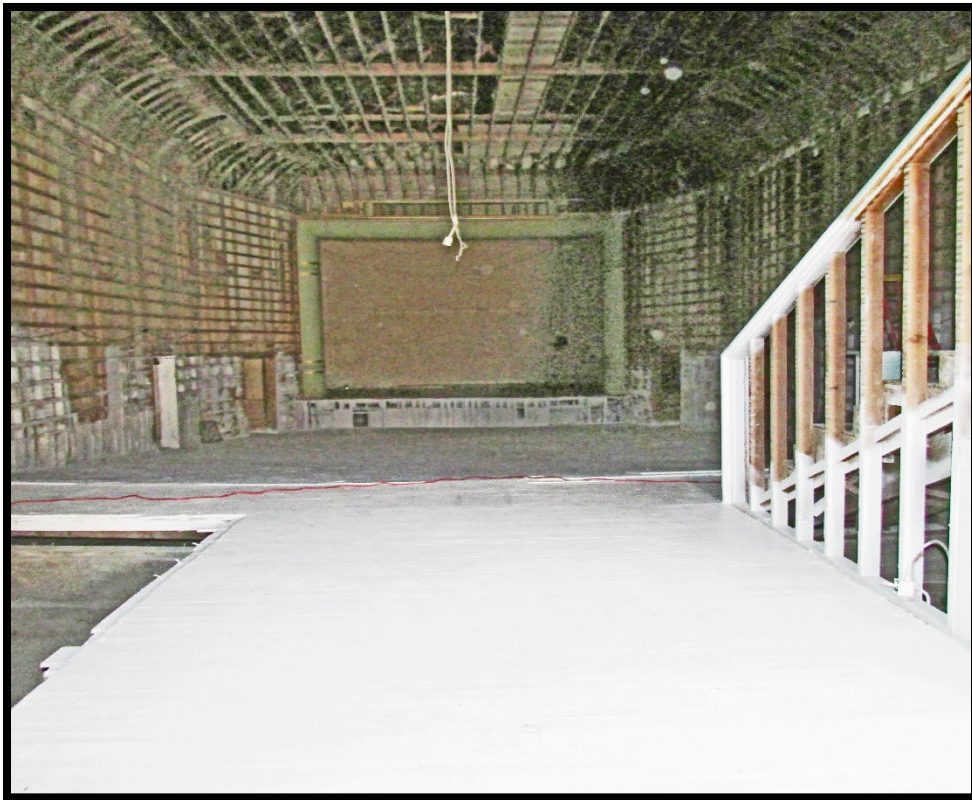

This next one shows the civil engineers and their transits making sure the base is perfectly level at all times.

More concrete forms visible and more stacked bricks. It looks like the cement is wet. Keeps it from drying too fast and cracking.

McGill News

Here are some more photos of the theater.

This was taken from the entrance. The hole on the left is where the one balcony was. It was dark in there and so the photo is a little fuzzy. The white is a special Kilz paint to prevent mold from forming. Here is that hole .

The ticket booth is on the left, the double doors are not original, to the right is where the popcorn machine was at. The fountain is there temporarily.

Old Photos

Taken in June 1935 from atop the Clubhouse. Notice the playground equipment. Did that go to the grade school? Look at the trees bending to the wind. These four pieces of equipment are just above the tall fence around the tennis courts.

For those who remember this sign at the front entrance to Kennecott.

This was taken from the plant side looking down toward the hospital. Don't have a date, but truck looks to be around 1950 and a few years old at the time.
